

## **ihiji's AMX Monitoring Module Benefits**

ihiji, creator of the award-winning remote monitoring and support system *invision*, is pleased to announce that it now offers feature-rich compatibility with Control4® home automation systems and ZigBee devices. *ihiji inversion* enables integrators to reduce servicing costs and increase system reliability while simultaneously empowering dealers to earn recurring revenue through the implementation of service contracts.

"Dealers will now be able to monitor many aspects of Control4 installations with *ihiji inversion*, including ZigBee devices," said *ihiji* president and co-founder Stuart Rench. "This represents a significant opportunity for all Control4 and *ihiji* dealers. They can now approach new or existing clients with a proactive remote monitoring and support solution that integrates easily and ensures improved system reliability and performance through extended device visibility."

*invision* is a cloud-based remote monitoring and support system that enables 24/7 two-way communication with control, entertainment, network, HVAC lighting products and more. *ihiji* developed *invision* from the ground up, therefore retaining total control over the product roadmap. This unique advantage allows for the swift addition of features and enhancements to *invision*, while not burdening dealers with the added cost attributed to third-party licensing fees; making it the most cost-effective and feature-rich monitoring solution on the market today.

"Control4 has long held the view that in order to drive home automation adoption, everything in the home must work together," said Eric Smith, CTO and co-founder of Control4. "The *ihiji inversion* system will help our dealers provide higher levels of customer service and reduce the cost of their support infrastructure by proactively monitoring system interactions and reporting any deviations."

"We are thrilled by this announcement," said 2010 MVP Control4 dealer Keith W. Harrison of Total Home Technologies in Roseland, New Jersey. "We have been installing *ihiji inversion* more and more, as it builds significant value into our service offering. *ihiji inversion* not only details important information about our systems, it also allows us to deliver a more reliable solution for our customers, day-in and day-out. It gives us a strategic edge and makes us look like heroes."

### **The benefits of Control4 integration include:**

- No programming to monitor Zigbee devices
- Online/Offline Zigbee node status and detailed Zigbee network statistics
- Ability to directly monitor processor memory and utilization
- Quick soft reboots of processors can be performed within the *invision* web interface
- No need for expensive server or software license
- Ease-of-use eliminates the need for highly trained IT
- Ability to manage all contacts and parameters through *invision's* easy-to-use web interface
- Decreases the costs associated with configuring and maintaining a monitoring solution
- Central point of configuration and reporting
- Network Operations Center view of all client sites
